

# AVIO

## **Some AVIO services or resources are not visible in AVIO Manager, although IP settings are correct and they are in the same network. What can I do ?**

If you are using a PC, it is likely that your firewall settings prevent AVIO using certain ports to communicate. Often the AVIO Service is blocked by standard firewall settings in Windows. Therefore, please let your firewall settings allow communication for all AVIO software applications components (WINGS VIOSO, AVIO Manager, AVIO Service, AVIO Touch).
