

System configuration

Can I upgrade an Anyblend system to Windows 10?

Yes, from Anyblend version 4 Windows 8.1 and Windows 10 and Windows 8/8.1 are supported. But the feature to embed warping&blending into the Windows desktop processing has been dropped due to stability and performance concerns.

On Windows 8.1 and 10 Anyblend does not support Windows desktop warp&blend on consumer graphics cards any more!

You can upgrade to Windows 10 or 8/8.1:

- IF the target system runs a NVIDIA Quadro GPU (M4000 or better) or an AMD FirePro GPU (w600 or better)
- OR if you do **not** require Windows desktop warp&blend (e.g. if a third party application loads and processes the VIOSO calibration)

You must stay with Windows 7:

- IF the target system runs a consumer GPU (GeForce, Radeon, Embedded GPU, etc.)
- AND you require Windows desktop warp&blend
