

Using Calibrations

How do I get error logging information?

Our logging file is located in the working directory. This is usually in
C:\Users\Public\Documents\VIOSO

Next to a executable, there is a file called SPeASY.ini. There you'll find the attribute
LogFileLevel in <VIOSO\SPeASY\DebugOptions\ErrorHandling>

Standard value is 1. Set this up to 3 to have more verbose logging.
